Essential Dermatopathology is designed to assist pathology trainees, general pathologists, dermatology trainees, and dermatologists in understanding the basics of dermatopathology. It illustrates and defines common dermatopathology terms and descriptions, basic inflammatory patterns and their major differential diagnoses in the introductory chapters. The final chapters consist of a systematic overview of common dermatological conditions/lesions, logically described in separate chapters based on site of predominant involvement. The aim of the layout is to closely mimic the systematic method by which pathology slides are reported.

By Dr Sherin Jos Payyappilly

"Having had the privilege of listening to Dr Edward's lectures and slide seminars, I expected a distinct approach to dermatopathology in this book and plenty of photomicrographs. I was not let down in the slightest. In fact, I was pleasantly surprised, especially by the techniques section.

Essential Dermatopathology is a 469-paged hard-bound book with thick pages, co-authored by a dermatopathologist, Dr Edward, and dermatologist, Dr Yung. The book is essentially divided into 15 chapters and starts with the very basics of skin histology gradually building up to pathology. The introductory chapter illustrates the common cell types and terminologies one comes across while assessing a skin slide. It covers all the main headings in dermatopathology.

The layout is easy to follow and the descriptions are concise and clear. Each page is divided vertically in half, with images on the left and text on the right. Much of the photomicrographs are labelled with arrows and coloured text boxes, which are easy and clear to read and understand. Also included are relevant clinical images, which provide a perspective to a pathology trainee. Illustrative step-by-step pictures of cut-up protocols and laboratory techniques are included. These would attract junior histopathology trainees and

dermatologists who wonder what magic happens behind closed doors in the lab.

As a histopathology trainee, I found this book unique, with its techniques section that explains and provides pictures of biopsy instruments and techniques. I noticed the inclusion of the 2009 AJCC melanoma staging and classification.

A great advantage of this book is the vast number of good-quality labelled photomicrographs. The author has taken great pains to include images of normal structures in skin of various sites, hair and nail histology. Also, short but effective text accompanies most pictures. These make the book stand out from its peers.

This book helps lay the foundation in dermatopathology and would aid dermatologists and junior histopathology trainees equally. I would recommend that it should be available in libraries and perhaps within dermatology and histopathology departments. "
