Gr 2–5—This latest series installment uses stories involving a knight named Sir Cumference as jumping-off points to explore mathematical concepts tackles rounding. Edmund Rounds and his son, Rounds 2, are responsible for keeping an inventory of items at Sir Cumference's castle. When Rounds 2 hands over his latest counts for inspection, Edmund notices that the number of bread loaves and butter pots has not been totaled. Rounds 2 admits that adding is the difficult part. As they total the items together, he finds that it is much easier to calculate numbers in groups of 10 (10, 20, 30, etc.). His father tells him that for some items, such as the number of bees in the hives, it's acceptable to come up with an approximate number. To thank his father for his assistance, Rounds 2 sets off to count the bedding of some travelers passing by but discovers that the men are enemies intent on attacking the castle. As Sir Cumference prepares for battle, he asks Rounds 2 to retrieve the bow and arrow counts. While these items have been counted, they have not yet been totaled, and Rounds 2 is left to complete the calculations himself. By rounding up or down to the nearest 10, Rounds quickly completes the task in what soon becomes known around the castle as the Rounds 2 Method. VERDICT Complete with the illustration style and subtle puns expected of the series, this title will be enjoyed by fans of the previous books.—Meaghan Darling, Long Hill Township Public Library, Gillette, NJ

#### About the Author

"You are the boss of your stories. You can make anything happen."

Cindy Neuschwander is a native Californian born in San Diego, but she has lived in many places, including Germany, England, Austria, and Hawaii. She received a BA in international studies from Willamette University and an MA in education from Stanford University. She has been teaching since 1975, both at the high school and elementary levels. As a mathematics education specialist, Cindy sought ways to make math fun, interesting, and comprehensible to her students. In 1992, while living in England, Cindy began working on her first book with this goal in mind. *Sir Cumference and the First Round Table* took five years to reach publication, but it remains a very popular book for its presentation of math concepts as well as for its amusing and exciting story. It has been followed by further adventures of Sir Cumference and his family, including *Sir Cumference and the Dragon of Pi*, *Sir Cumference and the Great Knight of Angleland*, *Sir Cumference and the Sword in the Cone*, and *Sir Cumference and the Isle of Immeter*. Cindy speaks at conferences often about writing, mathematics, and being an author. In her spare time, when she isn't writing or dreaming up new math adventures, Cindy enjoys activities with her family. The entire Neuschwander clan has spent time on five of the earth's seven continents. Only Australia and Antarctica remain to be visited. Cindy lives in California with her husband and two sons.

Wayne Geehan, a graduate of the Art Institute of Boston, has been illustrating books, board games, and jigsaw puzzles for over 20 years. When he isn't painting in his Massachusetts studio, he enjoys being with his family, reading, and researching his family's genealogy.

Great series for math kids

By Scmx

The Sir Cumference books are great for kids interested in math. My 8yo son, who loves math, devours these, though my 8yo daughter who is not interested in math, finds these uninteresting as well. But they teach concepts in a really great, fun way.

I was very pleased with the series

By Amazon Customer

I was very pleased with the series. I bought them for my 7 year old and 5 year old grandchildren on the basis that if introduced to math terminology and concepts early-on in fun story form, later when actual math classes cover the material, they may already have a comfortable familiarity with the terms and concepts and be more quickly able to master the material. Hoping for more books in the future.

By DB

Big fan of Cindy Neushwander's Sir Cumference series. We have them all so it was nice to find a new installment. We had been reading this series to our daughter when she was five years old. She loves them now even at seven. Earlier, she didn't understand the mathematical concepts in the books but over time she began to "discover" things about the book and would run tell us. Love that the author was able to engage children and make math concepts not only fun, but able to show them in use throughout the books.
