THE BOOK OF CONSTELLATIONS: DISCOVER THE SECRETS IN THE STARS BY ROBIN KERROD PDF

This fascinating narrative recounts the history of astronomy and, with more than 100 full-color illustrations, it shows readers how to find the planets and constellations in the night sky. In ancient times, people thought that the Sun, Moon, and stars were gods. They recorded their movements and imagined that the stars made pictures in the sky. The Greeks and the Romans related these "pictures" of animals and men—or constellations—to their legends. They also identified planets and named them for their gods—Venus, Mars, Saturn, and Jupiter. Their observations marked the first step in the development of astronomy, which today is a sophisticated science. Modern astronomers have followed the tradition of naming heavenly bodies after ancient gods. For instance, the solar system's outer planets weren't identified until after the telescope's invention, but with their discoveries they were named after Uranus, a Greek god of the sky . . . Neptune, the Roman god of the sea . . . and Pluto, the Roman god of the underworld. The author recounts the legends connected with many constellations, including Aquarius, Aries, Cancer, Orion, and others. This beautifully illustrated book helps readers navigate their way around the night sky as they learn the significance of heavenly bodies' names. Color photos and illustrations throughout.

For the Soldiers

By Pauline Ellison

I bought this book as a request from a soldier in Afghanistan, they wanted to identify some of the stars in the sky. This one was very descriptive and pictures were good. A small way to say thank you to the USA soldiers

Good book

By Bea

I'm not done reading it but its very informative and easy to understand. I bought this for my grandchildren to learn about the constellations.

The Book Of Constellations

By Jim Colyer

THE BOOK OF CONSTELLATIONS 2002

Robin Kerrod presents the constellations known to the ancient Greeks. They looked at the stars and saw mythological creatures. They imagined gods and goddesses, heroes and fantastic creatures woven around racy stories. Astronomy and mythology were one. Of the 48 constellations listed by Ptolemy in his Almagest (The Greatest), a few actually look like what they are supposed to be. Leo the lion does resemble a crouching lion, and it is believed that the Sphinx in Egypt might have been inspired by Leo. In Greek mythology, Hercules strangled the Nemean Lion and made a cloak from its skin. The Sickle forms Leo's head with the first magnitude star Regulus at its end. Cygnus the swan is another constellation that could pass for what the Greeks saw. The swan was said to be Zeus in disguise as he lusted for Leda, queen of Sparta. First magnitude Deneb is the swan's tail with Deneb, Vega and Altair forming the Summer Triangle. Kerrod maintains that the Greeks were far enough south to see Crux the Southern Cross. Crux is the smallest but brightest of the constellations and points to the south celestial pole. There are two first magnitude stars: Acrux and Bcrux. I was lucky to see Crux twice, the first time in Australia, the second time in Bolivia.
